

# Top Tips for Securing Your WASENDER Account and Ensuring Continuous Activity

- Once the software is activated, the first thing you need to do is update it. The marked section in the photo shows what to follow.

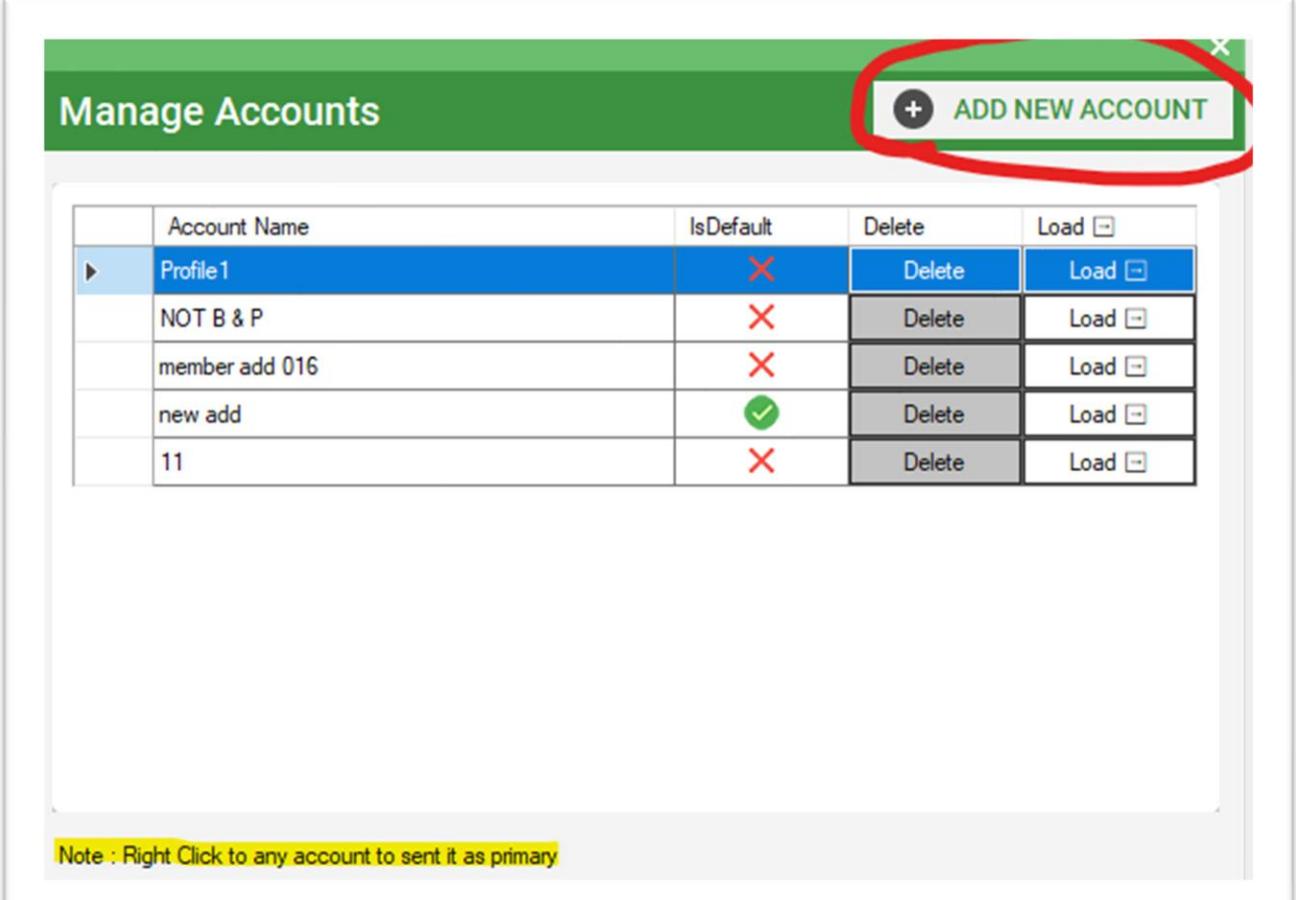

**NOTE:** To ensure the software runs properly, your PC must have the latest version of Chrome and Edge browsers updated.

2. Select this **filter number before sending messages**. This way, when you upload your contact list, it will automatically check which numbers are WhatsApp available. Numbers that are not available will be ignored, and messages will be sent only to available numbers.

3. When starting the campaign, you can select all the accounts at once and begin the campaign simultaneously. The more accounts you add, the smoother and more effective your campaign will run.

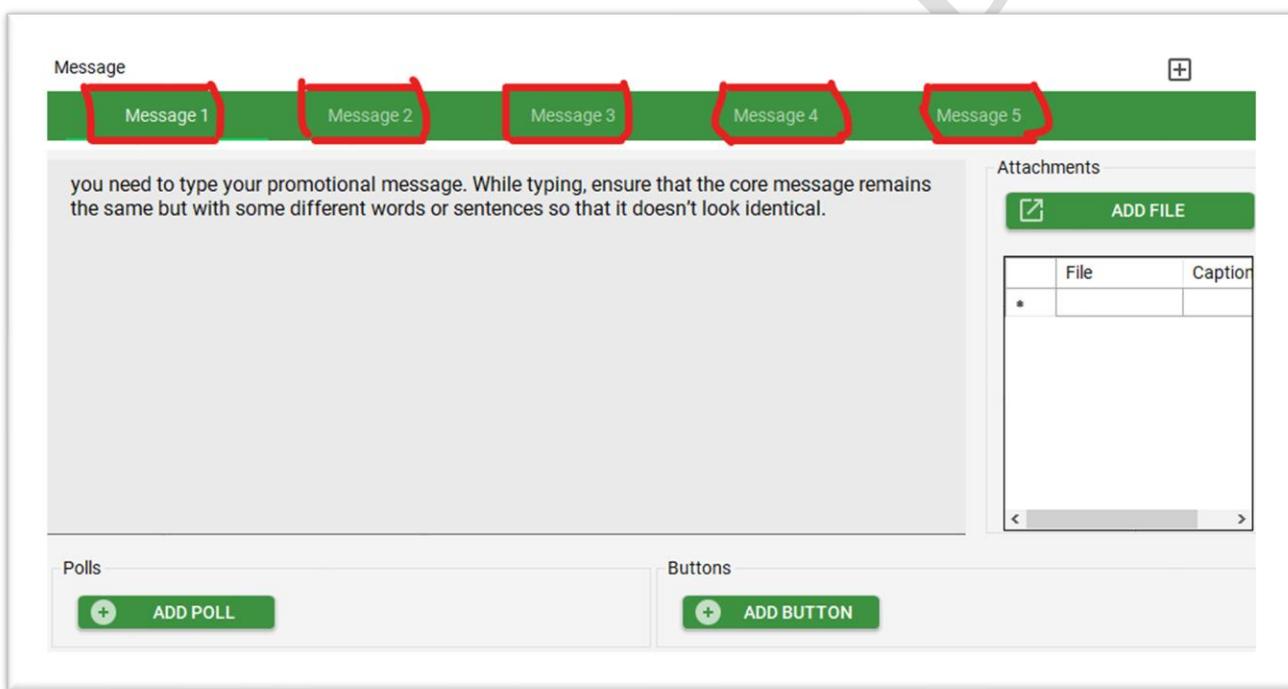

The screenshot shows a software interface titled "Manage Accounts". At the top right, there is a button labeled "ADD NEW ACCOUNT" with a plus sign icon, which is circled in red. Below this is a table with columns: Account Name, IsDefault, Delete, and Load. The table contains five rows of account data:

	Account Name	IsDefault	Delete	Load
▶	Profile1	✗	Delete	Load
	NOT B & P	✗	Delete	Load
	member add 016	✗	Delete	Load
	new add	✓	Delete	Load
	11	✗	Delete	Load

At the bottom of the interface, there is a note: "Note : Right Click to any account to sent it as primary".

**NOTE:** You can open an account with any number, whether it's a real number or a virtual one. However, I recommend using a real number for better reliability.

4. When you open the software, you'll see message boxes labeled msg1, msg2, and so on up to msg5. Here, you need to type your promotional message. While typing, ensure that the core message remains the same but with some different words or sentences so that it doesn't look identical. This way, each recipient will get a unique message, and it will appear more human-like, reducing the risk of being flagged as spam. It's crucial to follow this approach. You can also use photos, videos, website links, polls, buttons, PDFs, etc., alongside the main message without any issues.

**NOTE:** When creating messages, make sure they are crafted in a way that doesn't annoy your clients or lead them to block or report you. If your messages cause irritation or lead to reports, your account may easily get banned.

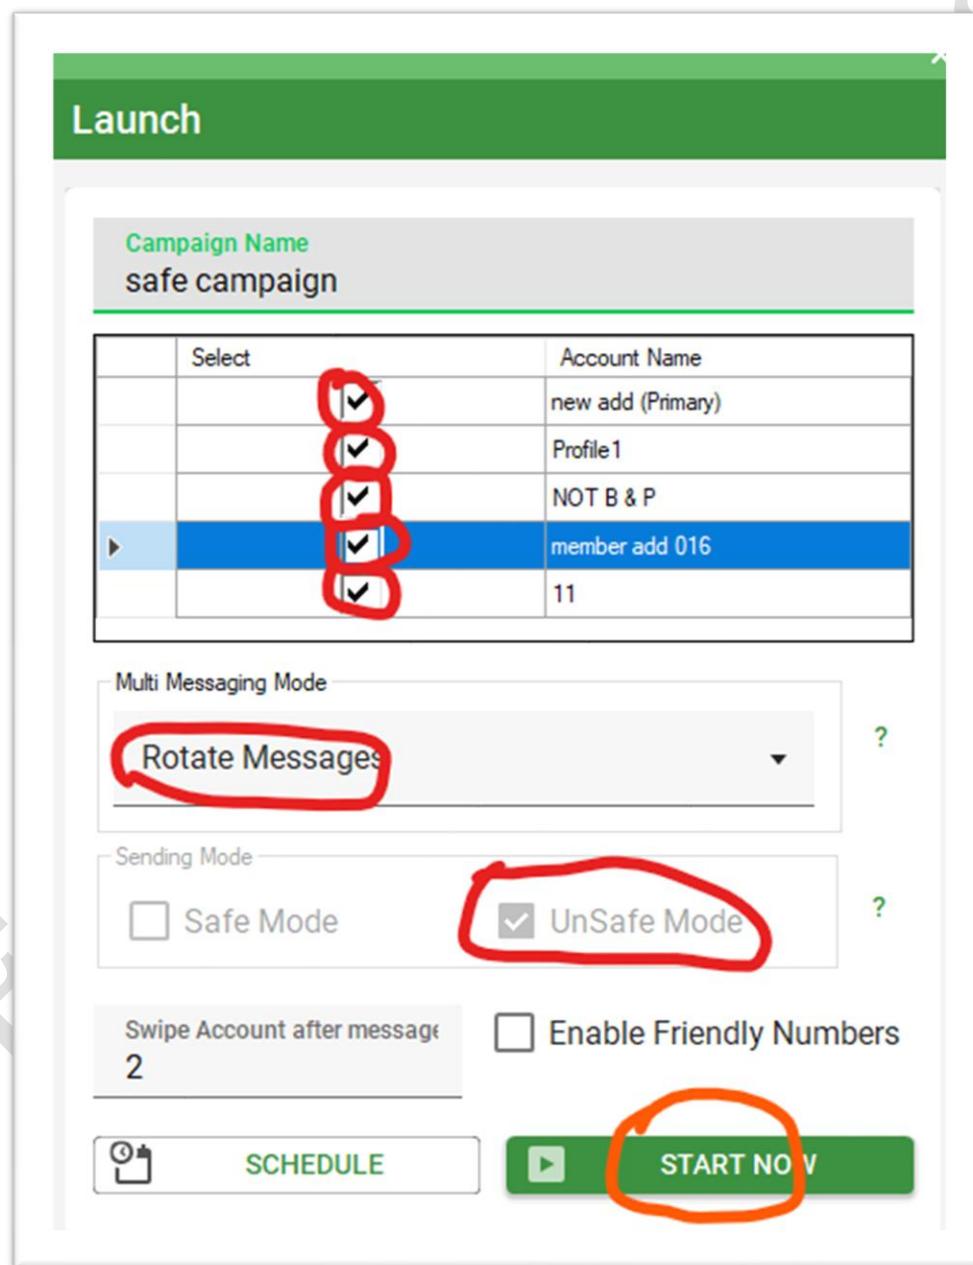

**5.** Delay settings are very important when running a campaign for the first time on a new account. For the first 10 days, follow the delay time set in the box. After 10 days, you can gradually reduce the delay time, and eventually, set it to 1 minute per message.

- **Green Mark** indicates how long the software will rest after sending 10 messages.
- **Yellow Mark** indicates how much time the software will take to send the next message after sending one message.

**NOTE:** The more delay time you set, the safer your account will be. Make sure that during the campaign, your PC doesn't enter sleep mode or shut down, as this will cause the campaign to stop.

6. When running the campaign, make sure to select all the accounts you've signed in with and also choose the 'rotate message' option. By selecting 'rotate message,' your messages from msg1, msg2, msg3, etc., will be sent to different contacts. If you choose something else, all messages will go to the same contact. Also, select 'unsafe mode' when you run the campaign for a single account.

NOTE: The more accounts you add, the better your campaign will run.

- 7.** To keep your account safe, it's crucial to monitor both outgoing and incoming messages in your inbox. If your account only sends messages but doesn't receive any replies, it might be flagged as spam. To avoid this, use the 'WhatsApp Warmer' tool to ensure that your accounts receive and send messages. When you start the tool, it will have your accounts interact with other accounts, ensuring both incoming and outgoing messages are balanced and your account remains safe. Follow the settings and delay time shown in the photo for best results.

WhatsApp Warmer

Select Accounts

Select	Account Name
<input checked="" type="checkbox"/>	Profile1
<input checked="" type="checkbox"/>	NOT B & P
<input checked="" type="checkbox"/>	member add 016
<input checked="" type="checkbox"/>	new add
<input checked="" type="checkbox"/>	11

Delay between 10 and 20 Seconds

Warming Type: One to One

Next Cancel

CLEAR SELECT TEXT FILE

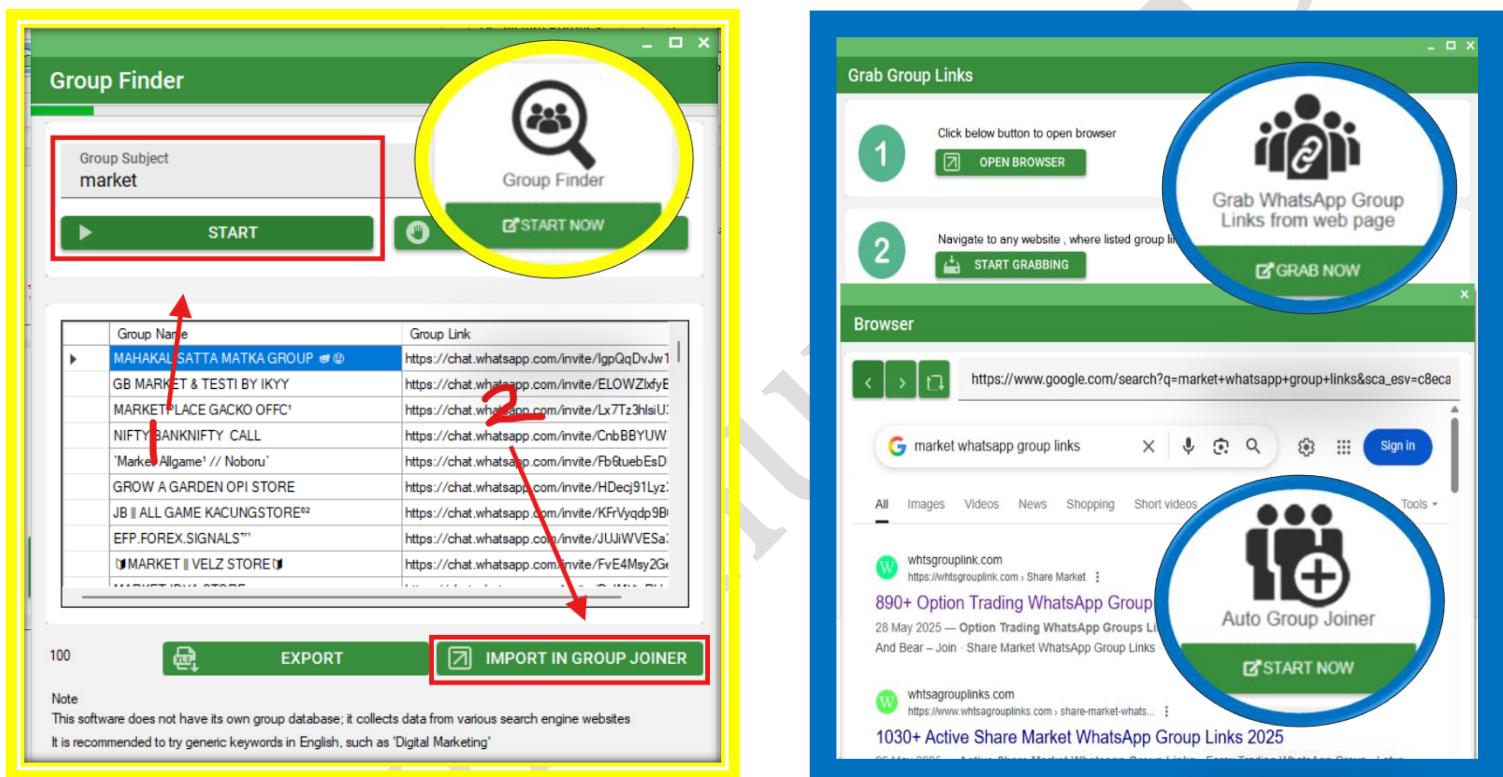

Next Cancel

Finish Cancel

**NOTE:** It's better to use this tool once before starting the campaign and again after completing the campaign.

## 8. Joining Random Groups for Better Message Balance:

To maintain a good balance between your outgoing and incoming messages, it's helpful to join some random WhatsApp groups. Using the software, you can easily find and auto-join these random groups. This ensures your account stays active and engages naturally with other users.

- **Yellow-Marked Tools:** Fast Method with 70% Accuracy for Finding Target Groups.
- **Blue-Marked Tools:** Advanced Method with 95% Accuracy for Updated and Highly Targeted Group Search

# Daily Messaging Schedule for One Account:

## Day 1 to Day 10

**Day 1: Send 30 messages**

**Day 2: Send 50 messages**

**Day 3: Send 80 messages**

**Day 4: Send 100 messages**

**Day 5: Send 150 messages**

**Day 6: Send 200 messages**

**Day 7: Send 250 messages**

## Check Out My YouTube Channel - **WASendX**

**Setting Up YouTube Subtitles/CC Easily:** By following the steps shown in the image below, you can quickly enable YouTube Subtitles/CC. Once enabled, you'll be able to view the spoken content of the video in your preferred language as on-screen subtitles. Simply ignore the original voice language of the video and focus only on the mouse clicks shown — this will help you understand the process clearly and without any confusion.
